LOAN INSIGHT

INTRODUCTION TO LOAN INSIGHT

- Banks handle many loan applications daily
- Manual approval is slow and may be biased
- Machine Learning helps automate decisions
- LoanInsight predicts loan approval using applicant details

➤ PROBLEM STATEMENT

- Traditional loan approval is time-consuming
- Human judgment can cause inconsistency
- Banks need a fast, accurate, and reliable system
- Automated loan prediction solves these issues

OBJECTIVES OF THE PROJECT

Objectives

- To predict loan approval or rejection
- To reduce human bias
- To improve speed and accuracy
- To apply Machine Learning in finance.

➤ TECHNOLOGIES AND MODEL

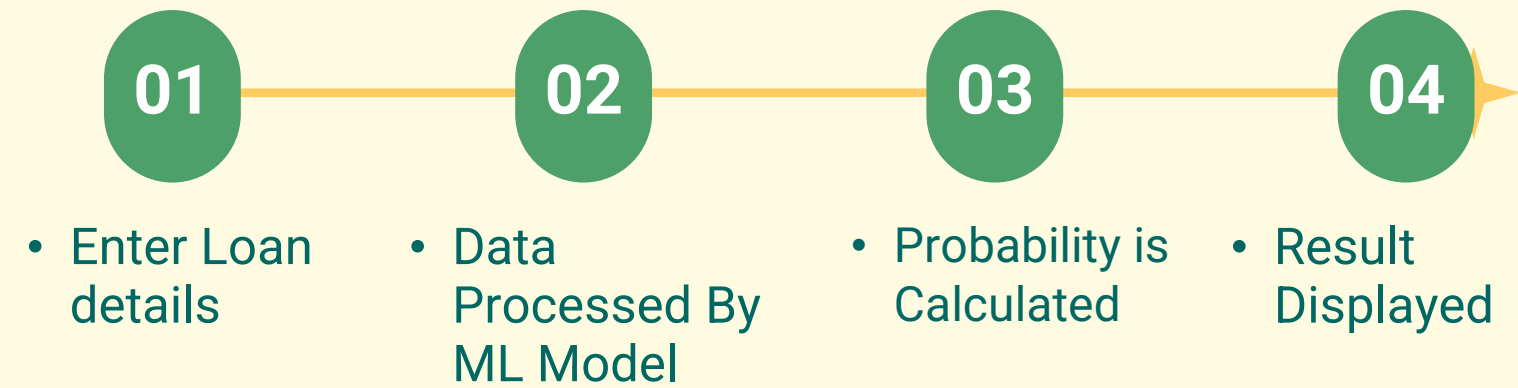

- Python
- Streamlit
- Pandas & NumPy
- Scikit-learn
- Matplotlib
- Logistic Regression for prediction.

➤ KEY PARAMETERS FOR LOAN APPROVAL

- Input Parameters
- Monthly Income
- Credit Score
- Loan Amount
- Employment Type

➤ SYSTEM WORKING

- The above diagram shows the working flow of the LoanInsight system and shows complete system in four simple steps.

➤ CONCLUSION

- LoanInsight automates loan approval prediction
- It improves efficiency and accuracy
- Reduces manual effort and bias
- Useful for learning ML applications in banking.
